Goals of Computer Graphics

- To use computer and mathematical techniques to build a virtual, real-like 3D world, animated by time changes, inside the computer <https://eduassistpro.github.io/>
- To study techniques that order the virtual 3D world to real-ages and movies

Movie Industry Applications

Different kinds of “CG” movies

- Type 1: Created entirely Using CG
e.g. "Frozen 2"
- Type 2: Real p
e.g. "District X"
- Type 3: CG Movie + Real Pe
e.g. "Space Battleship Yamato"
- Type 4: Conventional movie with CG special effects
e.g. "Initial D" (production documentary)
- Type 5: “3D Movies”
e.g. "Avatar"

Game Industry Applications

- Mobile phone games (i-phone apps, android ...)
- Playstation (PS, Nintendo, Sega ...)
- PC Single Person games (Single player and multiple player)
- Hand held games
- Web games
- Motion control
- ...

Course Aim

- The aim of this course is to provide students with an understanding of the basic principles, concepts, and techniques of computer graphics from <https://eduassistpro.github.io/>.

Add WeChat edu_assist_pro

CILOS

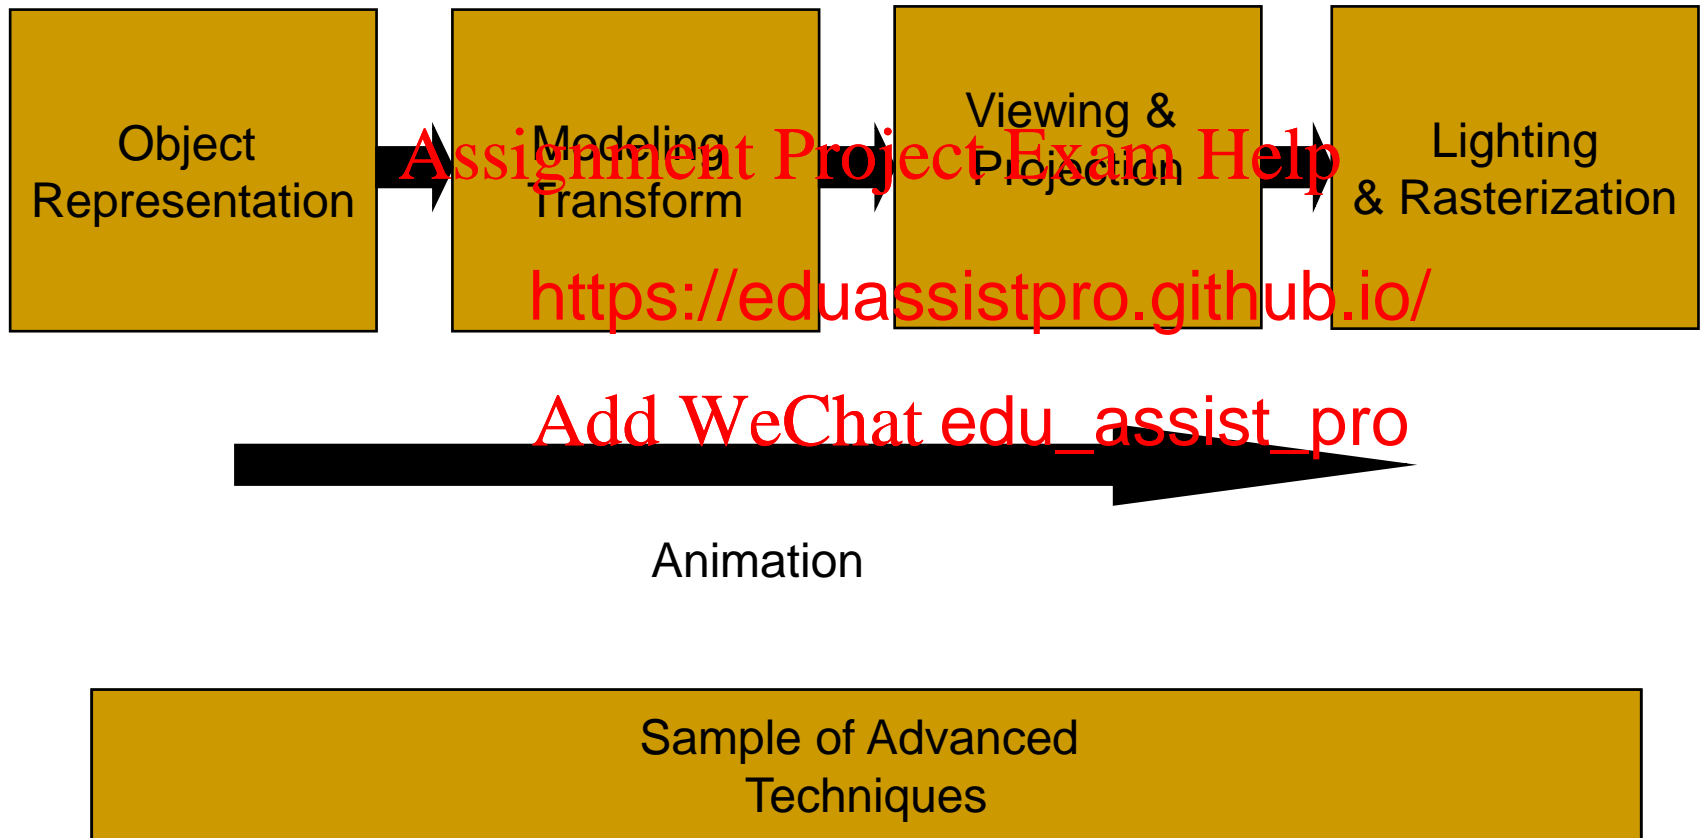

- (CILO1) Apply 3D object representation techniques to build up a graphics scene
- (CILO2) Model and view articulated objects by hierarchical structuring techniques and coordinate transform
- (CILO3) Apply advanced rasterization techniques to
- (CILO4) Apply texture mapping and animation techniques to create a movie
- (CILO5) Apply and evaluate advanced graphics techniques
- (CILO6) Create an animation or a game using computer graphics

Assignment Project Exam Help

Add WeChat edu_assist_pro

Course Content

Object Representation (CILO1)

Lecture 2

- How to construct simple objects such as spheres, cones, boxes...

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Modeling Transform (CILO2)

Lecture 3

- how to move the simple objects around, rotate them, scale them, reflect them.

Assignment Project Exam Help

Lecture 4

<https://eduassistpro.github.io/>

- introduce the idea of local system, and how to use the concepts to build coherent moving object by using the hierarchy concept

Viewing and Projection Transform (CILO2)

Lecture 5

- how to put the camera in a desired configuration within the graphics scene and
 - how to use different projection effects that can be achieved
- Assignment Project Exam Help
<https://eduassistpro.github.io/>
Add WeChat edu_assist_pro

Lighting and Rasterization (CILO3)

Lecture 7

- how to create light sources, shading and colour

Assignment Project Exam Help

Lecture 8

- how to elimi

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Lecture 9

- how to create realistic shadows

Animation (CILO4)

Lecture 6

- how to animate the images to create a smooth flowing movie **Assignment Project Exam Help**

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Advanced Graphics Techniques (CILO5)

Lecture 10

- How to create more realistic graphics by texture mapping

Assignment Project Exam Help

Lecture 11

<https://eduassistpro.github.io/>

- Sample of advanced techniques

OpenGL Mini Project (CILO6)

- This course uses the open source de facto industry standard: OpenGL, It is a C/C++ library that allows C programmers to write programs that directly access graphics hardware
- The gl and glut
- How to learn OpenGL
 - a) Learn during lecture, tutorial and mini project
 - b) Search the web for the command
 - c) OpenGL Function Index at the end of the text

Other forms of OpenGL

- Fixed function OpenGL is taught in this course first as it is the best for beginners. There are other forms of OpenGL [Assignment Project Exam Help](#)
- WebGL - Open <https://eduassistpro.github.io/>ular
- OpenGL ES is used in [Add WeChat edu_assist_pro](#)iphon
- OpenGL shading language (ed nowadays

Relationship of this course with commercial software

- Commercial software e.g. 3D studio used by game developers, many TV commercial studios and architectural visualization studios, movie effects etc.
- This course gives you insight into how behind the techniques in the industry are.
<https://eduassistpro.github.io/>
 - You can use them more sensibly
 - You know the limitations of these tools and why
 - You acquire the background for more advanced state of the art knowledge (e.g. SIGGRAPH is the premier conference in CG)
 - You can create a new special effect not supported by the software or research your own novel effect
 - OpenGL is also a popular tool

Text Book and References

- Text book:
Computer Graphics with OpenGL, Hearn and Baker, 4th Ed. (2011)
Pearson (ISBN 10: 0-13-248457-9)
- Course Reserve has four copies. To access Course Reserve, go to CityU Library and

Mathematical Background

- You should have the mathematical background below:
 - ❑ 3D coordinate systems in Euclidean coordinates and polar coordinates
 - ❑ Basic matrix and vector arithmetic
 - ❑ Calculation of
 - ❑ Scalar (dot) product and its physical meanings
 - ❑ Vector (cross) product and its physical meanings
 - ❑ Concepts of partial derivatives
- Please consult any standard text in Linear Algebra

Non-standard mathematical notation used

- $|\mathbf{N}|$ is normally used to denote the magnitude of vector \mathbf{N} and is a scalar. In this course, $|\mathbf{N}|$ is sometimes also used to denote "to a unit vector"

<https://eduassistpro.github.io/>

e.g. The light source is at (3, 3, 3), the surface point is at (0, 0, 0). The unit li or

$$L = |(3,3,3) - (0,0,0)| = \left(\frac{1}{\sqrt{3}}, \frac{1}{\sqrt{3}}, \frac{1}{\sqrt{3}}\right)$$
